THE ALPHA 2 PAGER PROGRAMMING MENU

Escape	**Left**	**Right**	**Read**
Key	**Key**	**Key**	**Key**

- Turn the pager off by holding the *Escape Key.*

- Using the & *Arrow Keys*, scroll through the various settings until *POWER OFF* is found.

- Press the *Read Key* to select this menu item. Confirm selection by pressing the *Read Key* again. The pager will then turn off.

- Before attempting to enter the Alpha 2 pagers programming menu, the pagers CPU must be reset. This is achieved by removing the battery and inserting it the wrong way around for about two seconds.

- Now remove the battery and hold down the *Read Key* while inserting the battery the correct way around this time. The pager will display *MNL PROGRAM*. Press the *Read Key* to proceed.

- You *may* be prompted for a four digit numeric password if this feature has been enabled in the programming software. Use the *Arrow Key* to change fields and the *Read Key* to move along to the next field. After the correct digits are entered, press the *Read Key* to proceed to the programming menu. By default this password is 0200.

- Once you are in the programming menu, you will see the first cap code ready for viewing or editing. There are six cap codes available in total.

- If you do not need to edit the six cap codes, you can press the ▶ *Arrow Key* while the ID number is flashing, to scroll through without changing them.

- Alternatively if you wish to edit the cap codes, Use the ▶ *Arrow Key* to change fields and the *Read Key* to move along to the next field.

- Each cap code can be enabled or disabled if required. This is what the *ON* or *OF* field just before the cap code digits refer too.

- After the sixth cap code has been edited, the next section is baud rate.

BAUD: 1200

- Use the ▶ *Arrow Key* to toggle between *512*, *1200* & *2400* bps. This setting must match that of your paging system. Press the *Read Key* when ready to proceed to the next section.

- After editing the baud rate, the next section is the frequency.

FRE   450.3250

- Press the ▶ *Arrow Key* to change fields and the *Read Key* to move along to the next field. This setting must match that of your paging system. Press the *Read Key* until the cursor reaches the end of the line, where you will move along to the next section.

- The last section asks you to confirm that all entered settings are correct before writing the settings to the pager. If everything is correct, press the *Read Key*, otherwise press the ▶ *Arrow Key* to go back to the cap code screen to make more changes.

- To exit the programming menu at any time, press the *Escape Key*.

FPROGRAM YES?

- Once the settings are written to the pager, it will turn off. Wait a few seconds, then you can press and hold the *Read Key* to turn the pager on. The pager will then resume normal operation with the newly programmed settings.
