

The ***USAAlert Alpha 2 Holster*** is made of durable molded plastic material with a semi-transparent smoke-black color, making an attractive combination with the black housing of the Alpha 2 pager. The holster design allows for quick removal of the pager from the holster when a message is received and desired to be read. The holster's transparency allows the user to read a message without having to remove the pager from it and also protects the pager's LCD from damage.

Although each Alpha 2 pager comes standard with a holster included, individual replacement holsters are available if needed.
