

**** Contact the office to order this product.**

The detachable **USAlert WatchDog LT Voice Pager Belt Clip** is made of the same durable polycarbonate material as the WatchDog LT pager. When receiving or playing back messages, the design of the belt clip allows the user to quickly and easily remove the pager from the belt. The size of the LT Belt Clip is slightly smaller than the WatchDog Belt Clip, due to the smaller size of the LT Pager.

To remove the belt clip from the pager, the belt clip's metal tab must be pulled away from the pager while pushing the bottom of the clip upward. A small screwdriver may be needed at times to pull the metal tab away from the pager and release the clip.

To attach the belt clip and ensure a solid connection, pull the metal tab back toward the top of the clip and slide it into the slot on the back of the pager until it "clicks" into place. A quick check to verify that it actually is locked into place - push the bottom of the belt clip upwards. If the belt clip does not move, it is locked in securely. If it does pop out, try to "click" it back into place again.

The belt clip is designed to be detachable, so a replacement clip can be ordered instead of shipping the entire pager back in for repair. Contact our office if the clip is ever damaged, lost, or will no longer consistently stay in place.
