

Although the **USAlert WatchDog pager** comes standard with a detachable belt clip, an attractive black **Nylon Carrying Case** is also available giving you another option for wearing your pager. The WatchDog Nylon Carrying Case includes a top flap that covers and protects the pager and attaches to the front of the case with a Velcro strip. The Velcro design allows easy retrieval of the pager when messages are received. There is also a rear flap that can be secured over a belt by snapping a pair of metal fasteners together. An array of front side holes allow clear audio to be heard while the pager is still in the carrying case.
